About

I am a software developer with 8+ years of experience in mobile app development, shipping products end to end on iOS and Android. I have taken active roles in building scalable, real-time mobile apps serving millions of users in security-critical, high-performance sectors such as e-commerce, finance and insurance.

Throughout my career I have owned more than development: architecture decisions, CI/CD automation, testing and App Store / Google Play releases. Going forward, I aim to take on Technical Leadership and Architecture responsibilities in complex systems that demand real-time data streams, low latency and high security standards, building sustainable and modular (Clean Code) structures.

Experience

01.2026 – Present **Freelance & Own Products** Freelance iOS Developer

- I build and publish my own mobile products: Go On: Bulmaca, Go On: Passaparola, Rowtr and TinyDays.

09.2024 – 01.2026 **Bimser Çözüm** Senior iOS Developer

- Took an active role in Bimser's mobile product ecosystem for enterprise business apps, most notably eBA Plus, which serves millions of users.
- Worked on the eBA Plus iOS app from scratch, owning it end to end: analysis, architecture, development, integration, testing and App Store release.
- The app uses a hybrid architecture built on REST APIs and JavaScript messaging (WebView–Native communication); I took an active part in designing, building and sustaining this low-latency communication layer.
- Handled bug analysis, fixes and new development on Bimser's other mobile apps such as Synergy, BEAM and QDMS.
- Took an active part in decisions on architecture, technology selection and development approach for upcoming mobile apps.
- Contributed to knowledge sharing, problem solving and better development processes within the team.
- Used Instruments and performance analysis tools to find and fix memory leaks, crashes and performance bottlenecks.
- Improved maintainability through modular development and streamlined App Store release processes with CI/CD.

03.2024 – 09.2024 **Freelance** Freelance iOS Developer

11.2022 – 03.2024 **Koçtaş** Senior iOS Developer

- Built new integrations and kept the existing architecture sustainable in a high-traffic e-commerce app, and helped deliver the app reliably to users.
- Worked in a 4-person mobile team inside a 13-person agile team, contributing to development, testing and release.
- Tracked and resolved production issues in real time with Firebase Analytics and Crashlytics, taking app performance and user experience to the next level.

10.2020 – 11.2022 **Doğuş Teknoloji** iOS Developer

Employed by Berkut Teknoloji; worked at Doğuş Teknoloji as an outsourced engineer.

- Developed Android and iOS applications.
- Used Java, Swift and Objective-C; the MVVM, MVC and CleanSwift architectures; and RxSwift and Combine.
- Took an active role in Volkswagen Commercial Vehicles, Volkswagenim, benimAudim, Scania'm Cepte and VDF (Insurance/Finance).
- Used Azure for CI/CD and worked with Agile principles.
- From 05.2022 to 11.2022, worked on the iOS development of Garanti Teknoloji's CepPOS app on behalf of Doğuş Teknoloji.

03.2020 – 10.2020 **Enqura Teknoloji** iOS Developer

- Used MVVM and RxSwift and wrote unit tests.
- Worked on the AXA Acentem, AXAFit and Groupama apps.

09.2018 – 10.2019 **Anonimya Teknoloji** iOS Developer

- Part of the teams behind AndroTürk and RadioBox, and built the Kazanım Kutusu app from scratch.
- All UI was built programmatically.

08.2017 – 08.2018 **Minerva Teknoloji** Android Developer

- Built the Android app of the startup Minerva from scratch.

Skills

Platforms & Languages	iOS (Swift, Objective-C), Android (Java, Kotlin), Python
UI & Frameworks	SwiftUI, UIKit, AutoLayout, Programmatic UI, Jetpack Compose
Architecture & Design	MVVM, Clean Architecture, MVC, Modular Architecture, SOLID Principles
Concurrency & Reactive	async/await, RxSwift, Combine, Kotlin Coroutines
Security	SSL Pinning, Keychain / Keystore Management, Secure Data Storage (Cryptography)
Networking & Real-Time	RESTful API, WebSocket, JSON, WebView–JS Bridge
Tools, Performance & CI/CD	Instruments (Memory/Crash Profiling), Firebase (Crashlytics, Analytics), XCTest (Unit/UI Testing), Git, Azure DevOps, SPM, CocoaPods, Docker, n8n
Location Services	MapKit, CoreLocation

Education

Necmettin Erbakan University
Computer Engineering, 2013 – 2020

Volunteering

Android Instructor, TURKCELL – Geleceği Yazanlar
Gaziantep, 2017

Android Instructor, TURKCELL – Geleceği Yazanlar
Konya, 2019
